

2000-2005 MR2 Vis Racing Hardtop Installation Instructions

The hardtop mounts in 4 places to the vehicle. The front of the hardtop attaches in 2 places using the factory levers/catchers. The factory soft top levers/catchers are transferred over from the factory soft-top to the new hardtop.

The other two mounting points are behind each seat. The hardtop comes with two brackets, one for each side. Each bracket is attached to the vehicle behind each seat and then mounted to the hardtop. It is recommended that the rear brackets are installed before latching the front and then the bolts tightened after the front is latched.

The rest of the installation consists of installing the rear lexan window and the front window seals. We highly recommend that the rear window and front seals are installed by a professional auto glass place, as they will have the proper tools, adhesive and experience to do it properly. Otherwise, you may experience wind-leaks or water-leaks later.
